Career Objective

I'm passionate about creating clean, user-friendly digital experiences that actually help people. Over time, I want to grow into someone who can design and build meaningful web products that make a difference. I enjoy working with modern tools and learning new things along the way, especially when it comes to design, development, and making the web more intuitive for everyone.

Education

2023 – Present	BSc (Hons) Computing <i>Islington College</i> London Metropolitan University Kamal Marg, Kamalpokhari, Kathmandu
2020 – 2022	SLC <i>Kathmandu Model College</i> National Examination Board(NEB) Bagbazzar, Kathmandu
2020	SEE <i>Gurukul Secondary School</i> National Examination Board(NEB) Bharatpur, Chitwan

Work Experience

06/2025 – 09/2025 Kathmandu,Nepal	Full Stack Development Intern, CBS Platform • Built a user-friendly form module enabling efficient data input and management. • Utilized ASP.NET Core MVC for application structure, Dapper ORM for lightweight database operations, and PostgreSQL for storage. • Designed and implemented form interfaces with server-side validation and backend data handling. • Ensured smooth data flow between Razor views (frontend) and backend logic to deliver a seamless user experience.
--------------------------------------	--

Skills

Technical Skills

• HTML • CSS • JavaScript • React • .NET • C# • Node.js • Express.js • Python • Java • Figma • Wireframing • Prototyping

Soft Skills

• Communication • Teamwork • Adaptability • Time Management • Interpersonal Skills

Academic Projects

Java GUI [↗](#)

Java | OOP | Swing

Built a GUI-based application using Java Swing to manage student and teacher data. Applied object-oriented principles by creating a superclass (Teacher) and subclasses (Lecturer, Tutor), with data stored and manipulated through lists for dynamic interaction.

Cliniterra – Clinic Management Website [↗](#)

Web Application

Developed a responsive clinic management system enabling appointment booking, doctor selection, and admin management. Integrated a backend using Jakarta EE and MySQL to securely handle doctor, patient, and appointment data.

Land Rental System – TechnoPropertyNepal [↗](#)

Python | IDLE | OOP, Lists, Functions, Dictionaries

Developed a land renting and return management system for a fictional company, TechnoPropertyNepal. The program tracks land availability, processes rental transactions, and generates invoices using core Python features like functions, loops, and object-oriented programming.

Full Stack Development with JavaScript, React and Node [↗](#)

Developed a responsive web application where users can take multiple choice quizzes. Built the frontend using React including question display, navigation between questions, and score summary UI and implemented backend with Node.js/Express to manage quiz questions and handle user interactions.

PawWell Care Center [↗](#)

Full Stack Pet Care Management Platform

Technologies: React, Node.js, Express.js, PostgreSQL.

Developed a web-based pet care platform that connects pet owners with veterinary and grooming services. Implemented appointment booking, pet profile management, and service scheduling features. Built secure user authentication and role-based access for customers and administrators. Designed a responsive and user-friendly interface to improve customer experience.

Dearly [↗](#)

Personal Journal and Diary Application

Technologies: .Net MAUI Blazor Hybrid, SQLite.

Architecture Pattern: Model View Service (MVS)

Developed a personal journaling application using .NET for creating and managing daily entries. Implemented CRUD operations for journal management with secure data storage. Built a responsive and modern user interface using MudBlazor and Bootstrap components. Added features for organizing entries by date and improving user productivity. Designed a clean and intuitive user interface for a seamless writing experience.

AI-Based Chemical Count Detection [↗](#)

Machine Learning Prediction and Analysis System

Technologies: Python, Scikit-learn, Pandas, NumPy, Matplotlib, Machine Learning.

Performed data preprocessing, feature extraction, and exploratory data analysis to identify patterns in the dataset. Implemented and compared multiple machine learning algorithms, including **K-Nearest Neighbors (KNN)**, **Decision Tree**, **Random Forest**, and **Support Vector Machine (SVM)**. Evaluated model performance using accuracy metrics to determine the most effective prediction model. Visualized chemical count distribution and trends across different product categories to support data-driven insights.

Smart Inventory Management System [↗](#)

Python-Based Inventory and Order Management System

Technologies: Python, Collections Deque, Heapq, Datetime, OS.

Developed a command-line inventory management system using Python to manage products, stock levels, customer orders, and transaction records. Implemented product reporting, new product creation, inventory valuation, and transaction ledger tracking. Used data structures such as **queues**, **priority queues**, **stacks**, and **lists** to manage order processing, backorders, and delivery workflow. Built a recursive function to calculate the cost of composite products made from multiple inventory items.

Vehicle Parts Management System (VPMS)

Full Stack Vehicle Parts Inventory and Service Management System

Technologies: .NET 8, ASP.NET  Core Web API, Entity Framework Core, SQL Server.

Developed a full-stack vehicle parts management system to manage inventory, vendors, customers, sales, and service appointments. Built modules for inventory tracking, stock management, vendor relationships, and purchase order handling. Implemented customer and staff management features with role-based access control for **Admin**, **Staff**, and **Customer** users. Developed sales and transaction workflows including payment tracking, revenue reporting, and financial analytics. Designed appointment scheduling functionality for managing vehicle service bookings efficiently. Built secure RESTful APIs and integrated database operations for scalable backend performance.

Personal Projects

Terranova Real Estate Collection

Frontend Project

Tech Stack: Next.js, React.js, TypeScript, JavaScript, CSS, HTML

Terranova Real Estate Collection is a modern luxury real estate web application designed to provide a seamless and visually engaging platform for exploring residential properties, land investments, and commercial spaces. The goal of the project is to create a premium property discovery experience that combines elegant design with intuitive navigation, making it easier for users to browse and compare different types of real estate. It aims to bridge aesthetics and functionality by delivering a modern user experience while maintaining a scalable architecture for future full-stack expansion. The project is also structured for future backend integration to support property management, user authentication, and advanced search capabilities.

Figma Work

Designed UI mockups and interactive prototypes using Figma.

Certificates
